

how commercial real estate infrastructure managers can capitalize on the 5G mobile market

drive new revenue from your existing assets

Communication Service Providers (CSPs) will deploy roughly 36 million 5G small cells by 2027¹. This aggressive buildout creates major revenue opportunities for owners of commercial real estate such as office buildings, shopping centers and apartment complexes. Not only do they enable CSPs to expand their 5G networks quickly and cost effectively, they can also help launch value-added services. For example, CSPs can deploy small cells on the exterior of a parking garage to help provide coverage on adjacent streets and buildings, which provide critical interconnection points to other CSPs and cloud providers and can enable edge computing applications.

the bottom-line benefits of an industry-standard format

The key to unlocking the value of your real estate assets is by using iconectiv TruOps Common Language, the same industry-standard terminology and framework that more than 1,800 CSPs, network element providers (NEPs) and equipment manufacturers rely on over 30,000 times each day. The Common Language suite of services enables you to identify, classify and understand the location, capabilities and other key attributes of nearly 600,000 pieces of infrastructure from 1,000 NEPs.

Using Common Language to register your real estate assets ensures that their attributes are accurately documented and exchanged in the telecom ecosystem's preferred format. This is critical for avoiding misunderstandings that can delay the launch of 5G services or increase the cost of deployment. As a result, using Common Language makes your assets more attractive to CSPs, putting you in a better position to maximize revenue and competitiveness. The Common Language registry ensures that decision makers see not only all of your currently available assets, but also forthcoming ones.

For example, site-selection managers can see the CSP functionality available at each of your sites. This elevates your assets above those of competitors that don't use Common Language to share that information in the industry's go-to resource and in the preferred format.

about iconectiv

Your business and your customers need to confidently access and exchange information simply, seamlessly and securely. iconectiv's extensive experience in information services, digital identity and numbering intelligence helps you do just that. In fact, more than 5K customers rely on our data exchange platforms each day to keep their networks, devices and applications connected and 2B consumers and businesses protected. Our cloud-based information as a service network and operations management and numbering solutions span trusted communications, digital identity management and fraud prevention. For more information, visit www.iconectiv.com. Follow us on X and LinkedIn.

make the connection

For more information about iconectiv, contact your local account executive, or you can reach us at: +1 732.699.6800 info@iconectiv.com

quickly exchange accurate data

Common Language supports the transport and access services requirements of CSPs. For example, the TruOps Common Language CLLI Code is an 11-character, globally unique identifier that represents a physical location for a network site such as a cell site or telephone pole, as well as the types of communications functionalities available at that site, such as a session border controller or wireless switch. CLLI Codes facilitate rapid and accurate communication of points of interface for interconnection and precisely identify the location of each asset — all of which makes you a more attractive partner to CSPs.

iconectiv TruOps Common Language Network Channel and Network Channel Interface (NC/NCI) Codes describe network channels, circuit-interface characteristics and associated interface specifications. NC and NCI Code sets simplify the provisioning and billing processes, and their standard, compact format makes it easy for CSPs to order access services.

Commercial real estate infrastructure managers can leverage CLLI Codes for:

Site selection support

prioritize new locations for development

Customer expansion efforts

broadcast availability of new sites to new and existing customers

how to get started

Common Language is a must-have for operations and network planning executives at data center operators. It makes your organization a more attractive partner for CSPs and enables you to move up the value chain by supporting connectivity services such as interconnection and 5G network expansion.
