

make the most of your assets

Imagine throwing away 20 percent of your capital expenditure every year.

For many service providers, this is actually a reality – and globally it equates to some \$65 billion annually. It is money lost through mislaid assets, mismanaged inventory and uninformed investment. It is money lost due to poor communication.

The data you need to protect and maximize your network investment exists, but it's scattered throughout your organization in a variety of formats across incompatible platforms.

These are managed by different business functions – so sharing information becomes difficult and collaboration inefficient.

To streamline data management and leverage information to create a more effective working environment, you need to communicate better. And you all need to understand a common language.

the solution

We have brought together our 30+ years of knowledge and experience in the communications industry with the history and expertise of SAP® - the acknowledged market leader in enterprise application software - to create the Common Language² on SAP solution.

It works by combining iconectiv's Common Language^{®*}, the telecom industry's recognized standard for interconnection, with powerful tools from SAP to create an easy-to-use dashboard that enables cross-functional collaboration between the network, operations and finance teams.

Common Language simplifies internal operations by enabling unified access to centralized, standardized and accurate information on network equipment assets, equipment locations, and facilities.

Presented in a "common language", data becomes more powerful, more meaningful, and more valuable. You can understand the data as it applies across the organization, and mine its true value.

You'll know exactly what your assets are, where they are, and how much they are costing you. You'll have real-time insight into your network spend – right down to the financial performance of every network element.

common language on SAP

single screen simplicity

The iconectiv Common Language on SAP solution brings together your organization and your supply chain, creating data sets that everyone can interpret in the same way. It's simply a better way to run your business.

From a single screen, best-in-class dashboard, your asset data, network costs and investment performance are accessible at a glance. You and your colleagues can work together to improve the financial performance of your organization.

In short – you're now all on the same page, with the same information and the same understanding.

make the connection.

How confident are you in the location and utilization of your assets? Could real-time data and analytics help you make better business decisions?

Let us help you improve the efficiency of your business. Ask us how the new iconectiv Common Language + SAP solution can transform your business.

about iconectiv

At iconectiv, we envision a world without boundaries, where the ability to access and exchange information is simple, secure and seamless. Our network and operations management, numbering, registry, fraud and revenue assurance, and messaging solutions enable the interconnection of networks, devices, and applications for more than 1,200 customers globally and two billion people every day

key benefits

more effective asset management

- Reduce spares inventory with no impact on service levels
- Locate and reuse equipment to reduce waste and environmental impact
- Manage and monetize equipment recalls

more informed investment decisions

- Combine real-time network data with accurate financial information
- Calculate TCO on a per-network, per-vendor, per-product basis to rationalize spending
- Understand how every investment performs and plan the next spend accordingly

more efficient working practices

- Simplify and streamline process automation
- Identify individual network element faults and fault patterns
- Immediately locate replacements for priority fixes
- Reduce servicing costs and time to resolution
- Improve levels of customer service

more visibility, less effort

- Meet financial and compliance requirements with clear, easy to access reports
- Gain a new level of insight into the financial, operational, and overall health of the business
- Access measurable data to improve a myriad of business outcomes
