

manage your network as an economic asset

Each year, ~20% of a service provider's CapEx budget is wasted. That amounts to ~\$65B annually. Better management of CapEx requires real-time insight into and control over the network – both in terms of service delivery and financial performance. Fortunately, the data exists to drive this transformation. Unfortunately, it often resides in siloed systems managed by different business functions, which makes it difficult for network, operations and finance teams to meaningfully collaborate.

iconectiv® and SAP® have a new solution for service providers to unlock the intelligence in their data and protect your CapEx. The Common Language on SAP solution provides an actionable, decision-making dashboard that allows for cross-functional collaboration and data sharing. It allows service providers to:

Effectively Manage Equipment Assets

by reducing spares inventory without impacting service and reliability; finding and reusing equipment and effectively triaging, managing, and monetizing equipment recalls.

Make Better Investment Decisions

by combining real-time network data with financial information.

Improve Efficiencies

by simplifying and streamlining process automation.

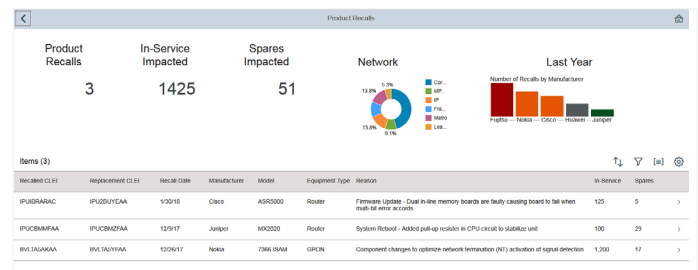

Meet Financial and Compliance Requirements

by having reports at your fingertips that help you meet new reporting requirements, such as those included in the International Financial Reporting Standard (IFRS) 15.

iconectiv + SAP

From iconectiv®, the authoritative partner of the communications industry for more than 30 years, and SAP, the market leader in enterprise application software, comes a solution that helps communication service providers manage networks as an economic asset.

Leveraging iconectiv Common Language®, the industry recognized standard for interconnection, and powerful SAP tools, the solution provides data standardization and dashboard visualization capabilities that helps to reduce waste, increase asset utilization and improve collaboration between network and finance teams.

make the connection.

How confident are you in the location and utilization of your assets? Could real-time data and analytics help you make better business decisions? Let us help you improve the efficiency of your business. Ask us how the new Common Language + SAP solution can transform your business.
